The Basics of Waterjet

Waterjet is a cold cutting process used for the fabrication of flat-cut parts. High pressure water mixed with abrasive creates a needle-sharp cutting stream which can cut almost any shape and thickness.

Benefits of Working With Sundance

Sundance Architectural Products has the manufacturing capabilities to cut virtually any material, any shape, any size. Our custom, quick turn waterjet cutting services offer a cost-effective and on-demand solution for your manufacturing needs. Sundance has the ability to cut most jobs using standard file formats. Let our team handle all aspects of your project, from design, material purchasing and cutting to delivery and install so you can receive a finished product without getting your hands wet.

Cutting Specs

Pressure **60,000PSI** | Maximum Cut Size - **13'0" x 6'0"** | Maximum Cut Thickness - **Up to 8"** | Tolerance (+/-): **0.001 in**
